**G LAB have taken all of us by surprise!** Till this moment G LAB has had in its offer only the Guitar System Controller GSC for guitar players and the wah-ped. It have changed . pedal effects and the active speaker for guitar players have had the absolute premiere on the fairs.

Our attention focused dual overdrive . but its not the final truth. This device is 3 channel one. For disposal are available two overdriven channels and the clean channel which can be modified into light crunch. Additionally 3-point equalizer with 3 dB boost. Each overdrive channel has got its booster too ;) Cost . less than 500 PLN. We can obtain from this effect massive sound power thanks to active guitar speaker . based on 12+Celestion Vintage30 speaker and transistor amp, ideal solution for all POD players and other %effect users+coming from DigiTech and TC.
